

Session 3

Memory Fix of the library:

1. Open the pubsubclient.h file using a text editor from the Arduino libraries folder. On a Mac, this will be located at
~\Documents\Arduino\libraries\arduino_504557\src
2. Edit the MQTT_MAX_PACKET_SIZE to something larger. Increasing it to 256 seems to work pretty well.
3. Recompile and re-upload the firmware to the device.
